

# Optimize management of complex cases.

Dynamic Digital Radiography (DDR) for detection of aberrant segmental motion through the full range, with objective measurements in every radiology report.

## ABOUT DDR

Low-dose imaging at up to 15 frames per second through the full range of motion. Read by Brian Gatterman, DC, DACBR.

## CLINICAL USES

- Cervical/lumbar instability, CCI
- TMJ disorders
- Extremity and post-surgical joints; PI cases
- Personal-injury documentation

## WHEN TO REFER

- Symptoms outpace static imaging
- Suspected instability after trauma
- Pre- or post-surgical planning
- TMJ dysfunction

## STUDIES AND PRICING

| Study                                           | Price   |
|-------------------------------------------------|---------|
| Extremity Motion Study (one joint)              | \$795   |
| Focused TMJ Motion Study                        | \$750   |
| TMJ + 30-min consultation                       | \$1,025 |
| Advanced Spine Motion Study (cervical: 6 views) | \$995   |
| Spine + 30-min consultation                     | \$1,270 |
| <b>ADDITIONAL DDR IMAGING, SAME VISIT</b>       |         |
| Each additional extremity joint or TMJ          | \$650   |
| Each additional spinal region                   | \$895   |
| <b>OPTIONAL ADD-ONS</b>                         |         |
| CRMA, spine only: first region                  | \$350   |
| CRMA, each additional spinal region             | \$250   |
| 30-min consultation with Dr. Pezeshkian         | \$275   |

CRMA (Computerized Radiographic Mensuration Analysis): software measurement of segmental translation and angular motion, delivered as a separate report.

## REAL CASES · case discussions available on request

### Post-surgical cervical revision

Abnormal motion not seen on static imaging.

### Lumbar instability

Segmental motion after normal static films.

### Coccyx instability

Instability visible only in motion.

## HOW REFERRAL WORKS

1. **Call, fax or email** to discuss the case.
2. **Same-week scheduling** for your patient.
3. **Imaging visit** of about 45 to 60 minutes.  
Patient leaves with a USB of the full study.
4. **Written report** in 7 to 10 business days.  
Expedited on request.
5. **Provider-to-provider** conversation available on every case.

### Payment

Cash, HSA/FSA, major cards, and monthly plans through Cherry. Personal-injury liens accepted for qualifying cases.
